

# Source reduction engineering that meets customer demands!

## They're Strong

### Advanced Polymer Blends!

- Improved performance at thinner gauges
- High quality prime resin
- Star-Seal – the strongest seal available

**Savings** Why buy more plastic than you need? Better performance at thinner gauges means purchasing less plastic for the same job.

### Source Reduction through Technology

- Less plastic is needed for the same job
- Superior strength
- Double bagging not required

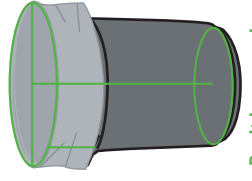

## They Fit

### The "Right-Size" Product Line

#### Quick Pick Liner Matching System

1. We identified the most common cans in the market place.
2. Each bag was hand-tested for the right size with proper overhang.
3. A "Right-Size" product line was designed that eliminates guess work, and saves you money.

Don't buy more bag than you need!

- Ensures the correct match between liner and can
- No more guess work – the Right-Size product line
- Prevents the bag from falling into can

**Savings** Eliminates the purchasing of oversized bags, and promotes product consolidation and SKU reduction.

### Source Reduction through Research

- Reduces plastic going into landfills
- Ensures plastic is not wasted due to over-sizing
- Improves supply chain efficiencies – packaging and transportation, etc.

## Natural Reinforcement

### Mineral Strength

### Up to 14% Natural Materials

Non-Petrochemical Reinforcement Additive

- A natural mineral reinforcement additive
- Greatly enhances the durability of the bag
- Non-petrochemical, abundant and all-natural

**Savings** With enhanced dependability, product failures become nearly obsolete, creating better workplace efficiencies.

### Source Reduction through Minerals

- Reduces energy used to produce the bags
- Increased bag durability
- Reduces the reliance on petrochemical materials

# Quick Pick Liner Matching System

# 3 steps to choosing a can liner:

- ✓ **Step 1** Decide which plastic type you need (right)
- ✓ **Step 2** Decide what gauge you need (right)
- ✓ **Step 3** Find your can letter on chart (right) and select matching product code below

## 1. Two Plastic Types

### Linear Low Density Bags (LLDPE)

Used for rough or sharp objects under tough transport conditions.

These liners are very strong and more resistant to tearing, but handle lower load capacities than Hi-D liners.

#### Suggested Low-D applications:

- Sticks, rough yard trimmings, glass
- Metal with sharp edges
- Plastic eating utensils, food with rough edges

### Hi Density Bags (HDPE)

Used for paper and non-rough objects under moderate transport conditions.

These liners are very strong and handle higher load capacities than LLD liners, but are less resistant to tear once punctured.

#### Suggested Hi-D applications:

- Paper plates, paper cups, paper towels, office paper
- Grass, rags, smooth heavy objects
- Cans without sharp edges, food without sharp edges

## 2. Gauge

### LLDPE Gauge

#### Gauge Equivalents and Recommendations

Light	.30 - .49	Mil	For small cans
Medium	.50 - .60	Mil	
Heavy	.61 - .74	Mil	
Extra Heavy	.75 - .80	Mil	For midsize cans
Super Tuf	.81 - 1.0	Mil	
Super Hvy	1.1 - 1.2	Mil	
XXH	1.3 - 1.9	Mil	For larger cans
XXXH	2.0 - 3.0	Mil	

### HDPE Gauge

#### Gauge Equivalents and Recommendations

Light	6 - 9	Mic	For small cans
Medium	10 - 12	Mic	For midsize cans
Heavy	13 - 14	Mic	
Extra Hvy	15 - 17	Mic	For larger cans
